FLEETPARTS

This Caliper is supplied with the Adaptor pictured fitted to the Caliper. This Adaptor converts the Caliper from the 'Steel Clip' type Potentiometer Connector to the 'Screw type. Allowing for secure connection, without hindering the performance of the Caliper.

If the Potentiometer Cable from the vehicle is required to be secured using the Steel clip only, then you must slide the Steel Clip to the left, until it is possible to release the Adaptor.

*NB: It is very important to remove the Adaptor carefully. It should not be necessary to turn the Adaptor in order to remove it from its location. Turning the Adaptor, or pulling using too much force may damage the Potentiometer wires underneath.
